TECHNICAL PROJECTS

C Trade | Lead Developer | June 2023| [Github](#) | [Presentation Video](#)
- Led a team of 3 to build a comprehensive web application to research and trade stocks.
- Used React, Redux, Express, PostgreSQL, and Node.
- Utilized web sockets to create a community with chat, friend, and other social media functionality.
- Set up authentication via local Email and password, as well as Google Oauth.
- Met with the team every other day to update on changes and overall structure of the app.

How mAI Help You? & UFC By The Numbers | Lead Developer | May 2023 | [Github](#)
- Created a sports statistics database to highlight key data points for bettors as well as tools that use AI to help you find your friend a birthday present and plan your vacations for you
- Used openAI API to create a specific itinerary or birthday present idea from a user's data
- Parsed through UFC stats API's to build an extensive data tool that users can use to make bets and predictions

Script for Java Coffee Shop | Full-Stack Developer | April 2023 | [Github](#)
- Collaborated with a team of 4 to create an e-commerce coffee shop
- Delegated tasks to team members and strategized app architecture
- Parsed through own and team merge requests to ensure stability of code and best practices.
- Allowed users to browse through a number of different items, add to cart, and make purchases.
